

N8824 - Signature Door Closer

To complete UNION's recently launched range of door closers, the **N8824** offers a robust, heavy duty backcheck door closer. Featuring three fully adjustable control valves, it is made from durable materials and **CE** marked, giving peace of mind. The adjustable backcheck helps to protect the immediate surroundings from damage. Its clean, smooth lines ensure that it will blend with both traditional and contemporary interiors.

The **CE** mark means this closer has been successfully tested to **BS EN 1154**. It has also been included in fire tests to **BS EN 1634-1**, with assessment for use on timber fire doors with intumescent protection up to **FD 120**. Factory production control audited by independent inspection bodies offers further reassurance that purchased products are identical to the tested models.
